PROFESSIONAL SUMMARY

Senior Frontend Engineer with 3+ years of experience building scalable React applications. Experienced in Redux state management, E2E test migration, and frontend observability. Skilled at translating complex product requirements into clean, reusable component architectures.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, Python

Frameworks & Libraries: React.js, Redux, Redux Toolkit, Next.js, Node.js

Testing: Jest (unit & integration), Playwright (E2E), Cypress

Observability & Analytics: Splunk Dashboards, RUM Interactions, Amplitude

Concepts: Data Structures & Algorithms, RESTful APIs, Feature Flags, CI/CD Pipelines, Git, Code Review, Agile/Scrum

WORK EXPERIENCE

Senior Engineer

Altimetrik (Intuit) — Jan 2026 – Present

- Architected and maintained a scalable Redux + Redux Toolkit state management layer across multiple QuickBooks product modules, reducing reducer complexity and improving long-term maintainability.
- Developed a self-serve data seeding widget that lets teams seed IES sandbox environments (otherwise empty at creation) with sample data for internal and external use, with 2 feature-flagged paths (single- and multi-entity) and integrated loading through error experiences.
- Owned frontend observability: instrumented RUM interactions and trace propagation, standardized Splunk logs and queries, built dashboards and alerts for on-call visibility, and shipped Amplitude-backed UI event tracking with a product analytics dashboard.
- Conducted thorough PR code reviews for team members, providing actionable feedback to enforce best practices, improve code quality, and ensure consistency across the codebase.
- Mentored junior engineers on building well-structured, reusable React widgets and guiding them through complex frontend patterns and component design decisions.

Engineer

Altimetrik (Intuit) — Apr 2025 – Dec 2025

- Developed a custom formula builder integrated into QuickBooks Reports, enabling users to dynamically define custom rows and column configurations tailored to their specific reporting requirements.
- Designed and shipped the QuickBooks Product Download Hub with OS-aware auto-detection (macOS/Windows) and a seamless toggle for web-app alternatives, improving new-user software acquisition flow.
- Built a reusable React widget and custom hook library decoupling complex business logic from presentation, enabling cross-module feature delivery with significantly reduced code duplication.

Associate Engineer

Altimetrik (Intuit) — Mar 2023 – Apr 2025

- Led the full E2E test suite migration from Cypress to Playwright, introducing parallel execution and reducing CI/CD pipeline build times by 30%, directly accelerating developer feedback loops.
- Contributed to feature development across core QuickBooks frontend modules with hands-on production experience in React, TypeScript, and RESTful API integration.
- Drove feature flag cleanup initiatives by identifying and removing unused or completed flags from the codebase, reducing technical debt, improving code readability, and shrinking overall codebase size by ~10%.

PROJECTS

Company Data Seeding Widget (Professional Project)

React.js, TypeScript, REST APIs, Feature Flags

- Engineered the widget using a modular React component architecture with custom hooks to manage async data flow, keeping UI logic cleanly separated from business and API layers.
- Designed the state management to gracefully handle both single- and multi-entity flows, with distinct loading, error, and success states for each path ensuring a consistent user experience.

Personal Portfolio Website (Personal Project)

React.js, TypeScript, CSS — github.com/assuregaonkar

- Designed and developed a personal portfolio website showcasing professional experience, skills, and projects, serving as a central profile for recruiters and collaborators.
- Built with a component-driven React architecture and responsive CSS layout to ensure a seamless experience across desktop and mobile devices.

ACHIEVEMENTS & RECOGNITION

- “Pat on the Back” Award — Recognized for maintaining the team’s highest sprint velocity and delivering a record number of production tasks within a critical release timeframe.
- “Rise and Shine” Award — Honored for extraordinary performance and consistent high-quality delivery with minimal supervision.
- “Standing Ovation” Award — Awarded for exceptional production delivery and an unwavering commitment to customer-centric product excellence.

EDUCATION

Bachelor of Engineering — Information Science & Engineering 2018 – 2022

Bapuji Institute of Engineering and Technology, Davanagere, Karnataka
